<----- Fusion Middleware Configuration Wizard ----->

Welcome:

Choose between creating and extending a domain. Based on your selection, the Configuration Wizard guides you through the steps to generate a new or extend an existing domain.

->1|Create a new WebLogic domain

| Create a WebLogic domain in your projects directory.

2|Extend an existing WebLogic domain

| Use this option to add new components to an existing domain and modify configuration settings.

Enter index number to select OR [Exit][Next]> 1

<----- Fusion Middleware Configuration Wizard ----->

Select Domain Source:

Select the source from which the domain will be created. You can create the domain by selecting from the required components or by selecting from a list of existing domain templates.

->1|Choose Weblogic Platform components

| You can choose the Weblogic component(s) that you want supported in your domain.

2|Choose custom template

| Choose this option if you want to use an existing template. This could be a custom created template using the Template Builder.

Enter index number to select OR [Exit][Previous][Next]> 1

<----- Fusion Middleware Configuration Wizard ----->

Application Template Selection:

Available Templates

| ____ Basic WebLogic Server Domain - 10.3.6.0 [wlserver_10.3]x
| ____ Basic WebLogic SIP Server Domain - 10.3.6.0 [wlserver_10.3] [2]
| ____ WebLogic Advanced Web Services for JAX-RPC Extension - 10.3.6.0 [wlserver_10.3] [3]
| ____ WebLogic Advanced Web Services for JAX-WS Extension - 10.3.6.0 [wlserver_10.3] [4]

Enter number exactly as it appears in brackets to toggle selection OR [Exit][Previous][Next]>

^[[A^[[A^H^H^Z
