

## centos 7 安装卸载apache(httpd)服务 - 博客频道 - CSDN

前面我们已经安装好了mysql，今天安装httpd，然后试着访问以下，由于博主已经安装过一次，所以先说卸载，再说安装

大笑

。

### 卸载

首先，要确认下是否有安装过，或者是系统自带了httpd服务，通过以下命令：

```
[plain]view plaincopy
```

在CODE上查看代码片

派生到我的代码片

```
1. # rpm -qa | grep httpd
```

或者：

```
[plain]view plaincopy
```

在CODE上查看代码片

派生到我的代码片

```
1. # yum list | grep httpd
```

我已经安装过一次了，所以我这边会显示如下：

```

[root@iZuf6dgvuvu8cyildhjwi4Z ~]# tpm -qa | grep httpd
-bash: tpm: command not found
[root@iZuf6dgvuvu8cyildhjwi4Z ~]# rpm -qa | grep httpd

```

然后我先来卸载我的httpd，首先要停止httpd服务，命令如下：

```
[plain]view plaincopy
```

在CODE上查看代码片

派生到我的代码片

```
1. # systemctl stop httpd.service
```

然后通过 rpm -e 或者yum -erase 命令都可以，不过rpm -e命名必须要自己先卸载依赖包，所以我用yum -erase命令卸载，命令如下：

```
[plain]view plaincopy
```

在CODE上查看代码片

派生到我的代码片

```
1. # yum erase httpd.x86_64
```

```
[root@iZuf6dgvvu8cyildhjwi4Z ~]# yum erase httpd.x86_64

## 安装

如果你想确认是否卸载干净，可以用list命令列出已经安装的查看下（卸载的第一步）。我们这里就不做这不操作了，我们直接用列出yum 仓库里面的httpd项，命令如下：

```
[plain]view plaincopy
```

在CODE上查看代码片

派生到我的代码片

```
1. # yum list | grep httpd
```

```

中间输入次 ‘y’ ，也就安装完成啦。  
然后我们通过如下命令查看httpd的运行状态：

[plain]view plaincopy

在CODE上查看代码片

派生到我的代码片

1. # systemctl status httpd.service

如果现实httpd没有启动的话，我们可以通过下面的命令启动服务：

[plain]view plaincopy

在CODE上查看代码片

派生到我的代码片

```
1. # systemctl start httpd.service
```

默认的www目录在/var/www/html/下面，所以我们写入一个html文件，查看下怎么样了，输入一下命令创建一个包含hello world字符串的文件：

```
[plain]view plaincopy
```

在CODE上查看代码片

派生到我的代码片

```
1. # echo 'hello world' > /var/www/html/index.html
```

然后，我们用curl访问下本地：

```
[plain]view plaincopy
```

在CODE上查看代码片

派生到我的代码片

```
1. # curl 127.0.0.1
```

```
[root@iZuf6dgvuvu8cyildhji4Z ~]# curl 127.0.0.1/forLightWay
hello world
```

已经在正常服务啦！
