HibernateTools工具通过hbm文件自动生成ddl、pojo等代码 - xiaoluo501395377 - 博客园

hibernatetools自动代码构建工具

ant的build.xml配置如下:

复制代码

xml version="1.0" encoding="UTF-8"?><project name="hibernate_tools" basedir="." default="dbschema"><property name="src"
value="src">property><property name="dbschema" value="dbschema">property><property name="lib" value="lib">property><
property name="bin" value="bin">property><property name="doc" value="doc">property><property name="dao"
value="dao">property><property name="hbmxml" value="hbmxml">property><path id="libs"><pathelement path="\$ {bin} "/>
<fileset dir="\$ {lib}"><include name="***/*. jar"/>fileset>path><taskdef name="hibernatetools"
classname="org. hibernate. tool. ant. HibernateToolTask" classpathref="libs">taskdef><target name="dbschema"><hibernatetools><configuration configurationfile="\$ {src}/hibernate. cfg. xml"/><hbm2ddl destdir="\$ {dbschema}"
export="false" outputfilename="dbschema. sql"/><hbm2java jdk5="true" destdir="\$ {src}"/><hbm2doc destdir="\$ {doc}"/><hbm2doc destdir="\$ {hbmxml} "/>hibernatetools>target>project>

复制代码

结合ant通过hbm文件来自动构建数据库schema和javabean等

所需要引入的jar包如下:

commons-logging-1.1.1.jar
dom4j-1.6.1.jar
freemarker-2.3.19.jar
hibernate3.jar
hibernate-tools.jar
jtidy-r8-20060801.jar(这个是在生成hbm.xml时所需要的)
mysql-connector-java-5.1.21-bin.jar
slf4j-api-1.6.1.jar
