## eclipse远程调试linux下的weblogic - neil365的日志 - 网易博客

```
第一步,修改weblogic根目录下user projects\domains\域名\bin\startWebLogic.sh文件;
找到以下脚本位置:
${JAVA HOME}/bin/java ${JAVA VM} -version
在该脚本后面添加如下内容:
JAVA_DEBUG="-Xdebug -Xnoagent -Xrunjdwp:transport=dt_socket, address=4000, server=y, suspend=n"
export JAVA DEBUG
注: address=4000远程启动调试端口,可以自行修改。dt socket这个一定要小写,否则将无法启动
weblogic.
第二步,还是上述文件,在第一步的添加文字的后面,有如下文字:
if ["$\{WLS REDIRECT LOG\}" = ""]; then
echo "Starting WLS with line:"
echo "${JAVA_HOME}/bin/java ${JAVA_VM} ${MEM_ARGS} ${JAVA_OPTIONS} -
Dweblogic. Name=${SERVER NAME} -D.java. security. policy=${WL HOME}/server/lib/weblogic.policy
${PROXY SETTINGS} ${SERVER CLASS}"
${JAVA HOME}/bin/java ${JAVA VM} ${MEM ARGS} ${JAVA OPTIONS} -Dweblogic.Name=${SERVER NAME}
-Djava. security. policy=${WL_HOME}/server/lib/weblogic.policy ${PROXY_SETTINGS}
$ {SERVER CLASS}
else
echo "Redirecting output from WLS window to ${WLS_REDIRECT_LOG}"
${JAVA HOME}/bin/java ${JAVA VM} ${MEM ARGS} ${JAVA OPTIONS} -Dweblogic.Name=${SERVER NAME}
-Djava.security.policy=${WL HOME}/server/lib/weblogic.policy ${PROXY SETTINGS}
${SERVER CLASS} >"${WLS REDIRECT LOG}" 2>&1
fi
现在要做的是把: ${JAVA DEBUG}变量加入的启动参数中,如下:
if ["$\{WLS REDIRECT LOG\}" = ""]; then
echo "Starting WLS with line:"
echo "${JAVA_HOME}/bin/java ${JAVA_VM} ${MEM_ARGS} ${JAVA_OPTIONS} -
Dweblogic.Name=${SERVER NAME} -Djava.security.policy=${WL HOME}/server/lib/weblogic.policy
${PROXY SETTINGS} ${SERVER CLASS}"
${JAVA_HOME}/bin/java ${JAVA_VM} ${JAVA_DEBUG}${MEM_ARGS} ${JAVA_OPTIONS} -
Dweblogic. Name=${SERVER NAME} -D.java. security. policy=${WL HOME}/server/lib/weblogic.policy
${PROXY SETTINGS} ${SERVER CLASS}
else
echo "Redirecting output from WLS window to ${WLS REDIRECT LOG}"
${JAVA_HOME}/bin/java ${JAVA_VM} ${JAVA_DEBUG} ${MEM_ARGS} ${JAVA_OPTIONS} -
Dweblogic.Name=${SERVER_NAME} -Djava.security.policy=${WL_HOME}/server/lib/weblogic.policy
${PROXY_SETTINGS} ${SERVER_CLASS} >"${WLS_REDIRECT_LOG}" 2>&1
fi
新增的地上如上红色标注部分。
```

第三步,打开eclipse,然后再打开Debug Configurations,选择"Remote Java Application",右键一

>new创建一个Debug应用。

eclipse远程调试linux下的weblogic - neil365 - neil365博客

## 注:

Name: 随便

Project: 调试工程

Connection Type: 选中"Standard (Socket Attach)"

Host:weblogic地址

port:weblogic调试端口,默认8453

然后点击"Debug"按钮进入调试视图,接下来就和一般的java程序调试没两样的。

## 编后语:

编辑shell脚本的时候,建议采用vi编辑,不要拖到本地,编辑后再上传,这样容易出现问题,比如空格,回车等字符在linux下都会出现问题,导致无法启动。
