sql server中sql语句中单引号怎么转义？ - dodo-yufan - 博客园

sql server有两个转义符：

'默认情况下，'是字符串的边界符，如果在字符串中包含'，则必须使用两个'，第1个'就是转义符

另一个转义符是"

当SET QUOTED_IDENTIFIER OFF时，"是字符串边界符， 字符串中的"必须用两个"表示。

```
vb: "" <=> "
sql server 2000: ''' <=> '
eg:
declare @SearchType nvarchar(50)
declare @SearchString nvarchar(255)
declare @SearchKey nvarchar(50)
declare @SearchSql nvarchar(2000)
set @SearchType = '2'
set @SearchKey = 'd'
set @SearchString = CASE @SearchType
                        when '1'  then '1 = 1'
                        when '2'  then 'p.ProjectName like ''' + '%'  +  @searchkey + '%'  + ''''
                        when '3'  then 'p.ProjectCity like ''' + '%'+ @searchkey + '%' +''''
                        when '4'  then 'c.CateName like '''  + '%' + @searchkey + '%' + ''''
                        when '4'  then 'p.ProjectManager like ''' + '%' + @searchkey + '%' +''''
                        END
set @SearchSql = N'
SELECT p.*,datename(year,ProjectPostTime)+ '   + '''-''' + ' + datename(month,ProjectPostTime)+ '+ '''-
''' + ' + datename(day,ProjectPostTime)' + ' as PostTime, m.EmpName,c.CateName FROM proProject As p
,mrBaseInf As m ,proCate c WHERE p.EmpID = m.EmpID and p.CateID = c.CateID  and '

 + @SearchString

print(@SearchSql)
exec(@SearchSql)
```
